

Water Jetting Wet Sands Blasting

The main benefits are a much faster process; water prevents friction and will not warp metal through the production of heat from friction; wet abrasive blasting is also known as dustless blasting, which significantly lowers dust emissions due to the element of water being added to the process. Sandblasters are suitable for dust-free blasting of the following solids with a grain size ranging from 0.2 to 1.5mm, such as Mineral blasting agent (sand), Sodium Carbonate (water-soluble), Slag (fine or coarse), Glass bead sand powder.

WSBN-B27KIT

BR27 Brass Straight Jet Wet Sands Blasting Kit

It combines with the pressure washer and injects the sands into the water jetting to aid in blasting off coatings from steel and concrete surfaces. It can be used on rust, paint, stains and graffiti. It features a strengthened carbide nozzle tube and a sand probe that will draw sands directly out of the bag, get the sands wet and have no atomized granules in the air for the operator to breathe. It includes a 10FT/3-meter sand delivery hose and an 18in/45cm sand probe.

CODE	WSBN-B27KIT
Max Pressure	4000psi/275bar
Max Temp.	60°C/140°F
Inlet Fitting	1/4" Female + 1/4" QD plug
Nozzle Orifice	1/4"-0°, orifice option
